Where learning about nature is Fun!

## Reduce, Reuse and Recycle!

It is estimated that as a nation we produce more than 250 tons of garbage per day! All this ends up in our streets, sea or in filthy dumps, creating an unhealthy environment and an eye sore for us and our visitors. But many of these materials can be reduced, reused or recycled and you can help! You can even start a recycling program in your school or community!

Find 10 things that are different in these two drawings.

Fill in the blanks to find out how you can Reduce, Reuse and Recycle.

I can \_\_\_\_\_ the amount of plastics bottle I produce, by getting a "green plastic bottle", filling it with water and taking it to school. I will reduce the amount of paper I produce by using \_\_\_\_\_ of my paper. I can reuse paper as \_\_\_\_\_ or for my art works at school. I will organize my school and friends to call 225-6080 to join the Read Write \_\_\_\_\_ program of the Belize Paper Recycling Company. When I go to the store I will take a cloth bag to **reduce** the amount of plastic. If forget to take my cloth bag, I will \_\_\_\_\_ the plastic bag as garbage bags. When taking a \_\_\_\_\_ I will reduce the amount of water I use. Whenever I am not using the fan, radio, T.V or \_\_\_\_\_ I will turn it off. I am important, I can \_\_\_\_\_ the environment!
